Summary

I am a data scientist with experience in bioinformatics, Bayesian statistics, and machine learning who focuses on medical- and biology-related domains. My thesis work focused primarily on algorithm development for microbiome data analysis. Other work included genomics, transcriptomics, sequencing, mouse studies, conservation, computational neuroscience, signal processing, electronic health record analysis, time series analysis, and natural language processing. Thus, I have experience in a variety of programming languages (R, python, C, Stan, Edward, tensorflow, matlab, bash), parallelization approaches (cpu, gpu, cuda), and wet-lab and sequencing techniques.
